Projects

AI Resume Screening System

July 2025 – September 2025

Python, Machine Learning, NLP, Scikit-learn

- Built an end-to-end AI-powered system to automatically screen and rank candidate resumes against job descriptions, reducing manual shortlisting effort.
- Applied NLP techniques (tokenization, TF-IDF / embeddings) to extract and match key skills, experience, and keywords from resume text.
- Trained and evaluated a machine learning classification/ranking model to score resume-job fit, improving shortlisting accuracy.
- Designed a clean pipeline for data preprocessing, model inference, and result presentation; structured code for reuse and scalability.
